

Develop the Python Script

(Develop a Python script)

Team ID	PNT2022TMID53790
Project Name	Industry-specific intelligent fire management system

Industry-specific intelligent fire management system

Create a code snippet using python to

1. Extract weather data from Open WeatherMap using APIs
2. Send the extracted data to the cloud
3. Receive data from the cloud and view it in the python compiler

OUTPUT:

The screenshot shows a Python script in a text editor and its execution output in a Python 3.6.5 Shell window. The script uses the 'requests' library to fetch weather data from the OpenWeatherMap API for Chennai, India. The output displays the temperature and humidity, followed by a detailed JSON response from the API.

```
import requests
a = "https://api.openweathermap.org/data/2.5/weather?q=Chennai,IN&appid=6d13d12f9cd34a07871a5795d01e2c47"
r = requests.get(url = a)
data = r.json()
print(r)
print(data)
temp = data["main"]["temp"]
hum = data["main"]["humidity"]
print("Temperature is : ",temp)
print("Humidity is : ",hum)
```

```
<Response [200]>
Temperature is : 298.14
>>>
===== RESTART: E:/IBM/pre/weatherMap.py =====
